Studio & Photography Packet

Running client work: the portal, the assets, the gear

A DECLARED STANDPOINT
Confidential · for Dot One Media staff

YOUR ROLE

Running client work

You run client jobs — photography, video, music, and government work — through the **client portal**, and you track the gear behind them in the **asset system**. This packet is your day-to-day; depth is in the full handbook.

Signing in

Use your **@dot1.media** studio account at **portal.dot1.media**. That one sign-in also opens the asset system at **assets.dot1.media** automatically. Signing out of one signs you out of both.

The client portal — the studio side

- **Status timeline** — every job is a session moving through 7 stages: scheduling → booked → day-of → post-shoot → editing → pre-delivery → final delivery. Advance it as you go; choose whether to email the client at each step.
- **Getting a job in** — client self-booking; internal booking (studio-only quick booking for mini sessions, email-only, no client account); an invoice (a bill that books the job); or importing past sessions from an Acuity CSV.
- **Services & add-ons** — session types by group (Photography, Video, Music, Government), each with an optional example image and an attached gear package.
- **Payments** — Square. Video 50% retainer; photography full or half; music/government by quote. Receipts are emailed PDFs; the home page shows a Pending payment panel; Check / Sync re-queries Square.
- **Invoices** — create, preview, and send a branded invoice with a retainer pay link; the client then signs agreements and sets a password. Sent invoices are archived.
- **Delivery** — paste the gallery link (photos, via CloudSpot) or video link; a confirmation asks you to verify before the client is emailed. Final delivery invites a Google review.
- **Messaging** — a two-way client thread (images supported), with a notification bell.
- **Client Accounts** — look a client up by email to reset a password or change their login email.
- **Analytics** (Business Settings) — revenue by service line, bookings by type, and by month.

Note: Photography routes to the Creative Director; video, music, and government route to the founder.

What your client sees

Clients book, sign, and pay in one flow, then sign in to watch their session's status timeline, message you, pay a balance, receive the gallery or video link, and leave a review. They see only their own sessions.

The asset system

- **Dashboard** — total value, counts, and a lifecycle attention list.
- **Inventory** — searchable table of equipment, software, and services; add/edit/delete; shows what's checked out.
- **Lifecycle** — items by urgency; fill in purchase dates + lifespans (equipment) and renewal dates (software/services) so alerts work.

- **Packages** and **Checked Out** — see gear packages below.

Gear packages

1. Build a package (a kit of gear) in the asset system's Packages tab.
2. Attach it to a session type in the portal (Services & Add-ons).
3. Check it out for a shoot with a due-back date; check it in on return. Inventory shows what's out; overdue kits are flagged.

Your runbooks

- **Book a client:** Sessions → New internal booking (or send an invoice) → enter details → create.
- **Send an invoice:** Sessions → New invoice → service + add-ons → preview → send; client pays retainer, signs, sets password.
- **Deliver:** advance to delivery → paste gallery/video link → confirm the send.
- **Gear:** Assets → Checked Out → check the package out with a due date; check in after the shoot.

If something's off

- Can't open assets → sign in at the portal first.
- A payment didn't show → use Check / Sync.
- A client email didn't land → copy the link from the session and send it another way; have the email domain settings checked.
- A change didn't appear → hard-refresh the page twice (the portal caches).
- Gear shows out but isn't → check it in from Checked Out.

This is your quick packet. The full **Dot One Media Employee Handbook** (in the portal Guide, and as a PDF) has every detail; each system also has its own in-app guide.
